The Timeless Group of Companies - Corporate Overview

Since its inception in 1994, the Timeless Group of Companies has worked hard to earn a reputation on Prince Edward Island and abroad for both technical excellence and also for ethical practices in the conducting of our business. Pursuing this mission has paid off over the years and has provided stability for the company. As our company grows, an ever higher percentage of our business comes from client referrals.

The Timeless Group of Companies is well known within the technology community on Prince Edward Island having been recognized with such awards as PEI's Technology Company of the Year, twice as the Exporter of the Year and also as Technical Innovator of the Year.

Timeless Professional Services, the consulting arm of the Timeless Group of Companies, is proficient in project management, IT and management consulting, health and high technology. The Timeless Professional Services team strives to provide a flexible, readily available, professional approach in any project that is undertaken. Timeless Professional Services uses our proprietary Web based project management system to manage our projects and ensure all work performed by Timeless is done in a timely and co-coordinated manner. Having control systems like this in place are essential in the real time management of projects for our clients around the world.

Timeless Technologies Inc., our parent company, has a long history of providing highly sophisticated information technology, application and database solutions based on the latest industry standards as well as on our own proprietary technologies. Timeless has developed software applications, front and backend database products for single location, networked client/server and secure ASP/web-enabled implementations.

Timeless Medical Systems develops advanced software applications and IT systems for the Healthcare industry. These are deployed as traditional software on Windows, MAC and Unix/Linux OS, networked client/server as well as wireless systems using various wireless protocols. The vast majority of our Healthcare applications now also include web or browser based versions.

In addition to our own product development, the Timeless Group of Companies has successfully implemented projects for other technology companies when the complexity level has proven to be beyond their expertise, and a significant portion of the Timeless revenue stream has come from taking over projects that were failing and turning them around.

The Timeless Group of Companies consistently hires top talent from the university programs on PEI, across the Maritimes and the rest of Canada. Timeless plans on complimenting its current 12 full time salaried employee and 10 member subcontractor pool with other talent in the next several months. Timeless also endeavors to make alliances with complimentary companies that have proven track records for sound business practices, innovative technologies and areas of unique specialization.
